Reading for pleasure	<p>Research shows that reading for pleasure has many non-literacy benefits including improving relationships with others and improving wellbeing throughout life. It has social benefits and can make people feel more connected to the wider community. Reading increases a child's understanding of their own identity, improves empathy and gives them an insight into the world view of others.</p> <p>Children with more positive attitudes towards reading are more likely to read at or above the expected level for their age and make significantly more progress in vocabulary, spelling and maths than children who read very little. There is a strong link between the amount of reading for pleasure children do and their reading achievement.</p>
